

Installation guide and Files upload settings for Prestashop

How to install the module in Prestashop?

Solution 1

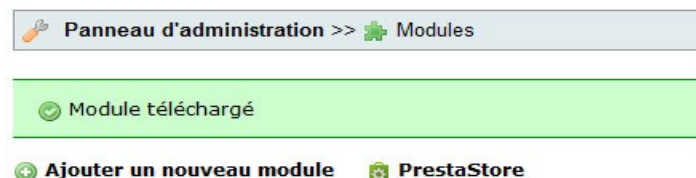

Log in to admin panel Prestashop. Then, click the **Modules** tab and then click **Add a new module**.

Click on **Browse in the File** module to upload the module provided.

The image shows a form titled 'Ajouter un nouveau module'. At the top, it says 'Le module doit être une archive ZIP ou TGZ.' There are two main sections. The first section, 'Adresse du module', has a text input field containing 'http://', a description 'Téléchargez le module directement sur internet.', and a blue button 'Télécharger le module'. The second section, 'Fichier module', has a file input field, a 'Parcourir...' button, a description 'Chargez le module depuis votre poste de travail.', and a blue button 'Charger le module'. A red arrow points from the 'Télécharger le module' button to the 'Parcourir...' button.

If the download went well you should have the following message:

Solution 2

If your server does not "unzip" module during installation or if you do not have rights to the server.

- ✓ Unzip the module on your desktop
- ✓ Upload the folder "filesupload" in the directory "modules" of the remote server via ssh or ftp
- ✓ Log in to admin panel Prestashop
- ✓ The module appears in the list of modules

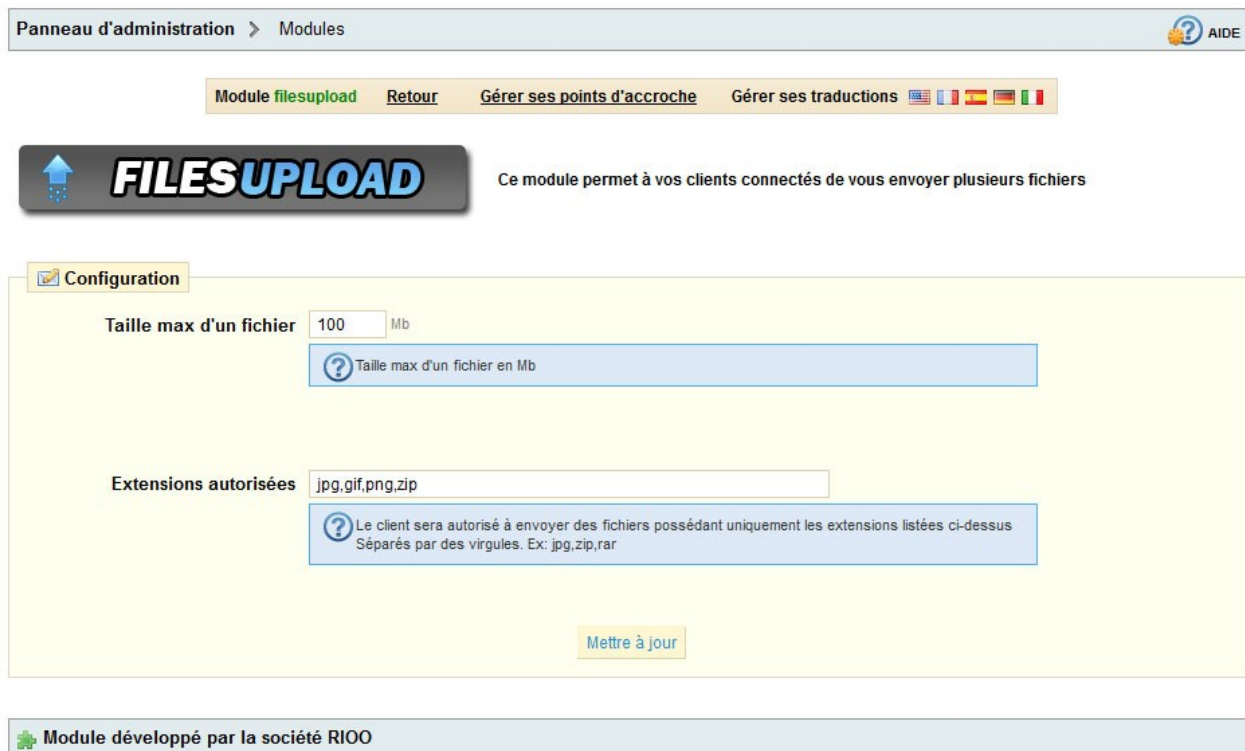

How to configure the module as PrestaShop ?

Open the tab « Front Office features » then click on « Install »

The installation done click on « Configure »
