Features and tricks

In the case of declination, product/declination is created and detail is inserted in the first line of the description.

Product reference is automatically created with management of duplicates (increment). Using the code {ref}.

If you are importing and updating your products with csv, always remember to initialize your products again so that your changes are synchronized in dolibarr.

To synchronize in Dolibarr categories and products only, simply unhook module in actionOrderStatutUpdate.(Modules / positions)
